

Customer: CRIO Medizintechnik GmbH

O2-bottles with TomTom WORK products to customers

The Company

In the field of cryotherapy procedures and the oxygen supply, the Birkenfeld company of Crio Medizintechnik GmbH has been a leading company for more than 20 years with its own research and development facilities. Its own service network with five branches guarantees quick and practical support throughout the country.

The Assignment

Since Crio supplies the same oxygen bottles with more than 30 vehicles to customers, the company wants to provide a more rapid response to customers' requests. For this, routes should be optimised, saving kilometers, stopping times determined and a solution used that is simple to operate. The simple installation of the telematics equipment was also a criterion.

The Solution

Since the beginning of 2003, Crio Medizintechnik has been operating happily and successfully with the TomTom WORK fleet management software and the telematics blackbox. This solution meets all Crio's demands.

The TomTom WORK equipment is used in all 37 of Crio's Renault Master vehicles. It was easily installed in the vehicles and supplies all the data required. Thanks to the fleet management system, the vehicle fleet can be followed on maps and coordinated. Crio is extremely satisfied with this system solution and also recommends it to affiliated companies.

Vehicle fleet: 37

TomTom WORK
