

## Customer: Hövelmann Logistik GmbH & Co. KG

### Shipments & Part shipments - Germany & Benelux

#### The Company

Since 1945, Hövelmann Logistik GmbH & Co. KG has been one of the best known partners in the transport industry for the acquisition of loads and partial loads throughout the country as well as in the Benelux. More than 100 modern tractor units with Tautliner or Frozen/Cooler trailer units provide Hövelmann Logistik customers a high level of flexibility and reliability.

#### The Assignment

Up until now, Hövelmann Logistik GmbH & Co. KG found communication with the drivers to be too time and cost intensive. Thus the introduction of a telematics system should allow vehicles to be located for an optimised operation as well as a communication with the driver without installing additional hardware at the company headquarters.

#### The Solution

After thoroughly researching the telematics providers in Germany, Hövelmann Logistik decided to equip their fleet with the TomTom WORK telematics and navigation solution. Thus it was made easier for the company to have direct contact with all vehicles. By sending orders with destination coordinates, when accepting the order the driver can immediately start the navigation to the destination location with a press of a button. „ [ ... ] This enormously simplifies the daily activities for both the drivers and the dispatchers. We have made considerable savings in communication costs and time. The goal is to equip the whole fleet with the TomTom WORK system.“  
(says D. Sundermann, EDV manager at Hövelmann Logistik)

Vehicle fleet: 100 trucks

TomTom WORK  
Fleet management

- Optimisation of the distribution
- Reduction of communication costs and communication expenditure
- Localisation of all vehicles
